

## "Bavaria 44" bowsprit installation

For this Bavaria 44', as we noted the important deployment, we chose a carbon bowsprit with an external diameter of 80 mm and a length of 2500mm. We made a special bracket, customly designed, disengage from anchor footprint. The foldable pad eye was set on the bow skylight.

Considering that this sailing boat is mainly used for cruising purposes, we paid much more attention to the

aesthetics' result than in any other sailing boats.

The impact of the bowsprit on the deck is very natural and once put to rest there is nothing left to hinder normal operations and life on board. The final result is 100% satisfactory.
