

## "Elan 380" bowsprit installation

The sailing boat model Elan 340 seems to be made for the installation of our bowsprit. The bow foldable eyebolt is fixed in its proper cockpit spot, while the bracket is located on the nose. We used the Sail Service carbon bowsprit with 80 mm diameter and the bracket (SBP80/H20). The bowsprit's head is perfectly aligned to the centerline of the sailing boat, with a significant but not risky overhang. It is in fact our duty to calculate the maximum overhang, according to the bowsprit's type as well as the sailing boat's type.
