

“FIRST 40.7”

Bowsprit installation

New version

For this First 40.7, we provided our new removable bowsprit version.

The owner wished that it could go forward of almost 1,5 meters because he wanted to improve the performance during racing as well as during normal sailing.

Because we wanted to satisfy the client, we had to use an 80 mm diameter carbon bowsprit with a total length of almost 3 meters. This way, we could pass to the stern of the anchor locker and, thanks to an easy-to-remove upwind, the bowsprit could be removed and stored.

We decided to make a custom bracket that is mounted to the forestay heath. It also disabled the possibility to make any holes in the deck and leaves the bow clean.
