

"Grand Soleil 343" bowsprit installation

On this Grand Soleil 343 we installed our 80 mm aluminum removable bowsprit. Because we wanted to get rid of the anchor footprint, we decided to use a polyzene standard tall bracket with a thickness of 2 cm. The forepeak let the bow bracket's fixing while the fixing of the rear eyebolt had been made by passing through the bow's cabin and by opening a small compartment. In this installation, we preferred using the already existing of the fixed pad eye.
