

"Hanse 411" removable bowsprit installation

On the Hanse 411 we installed removable bowsprit in carbon with 80 mm diameter. It allows the chance to mount an adjustable code-zero that makes both the assembling and disassembling easier to do. The ring bracket is custom-made as it had to be adapted to the existing nose.

It is important to note that the anodized aluminum version of the bowsprit can be also made without the upwind, ideal for a sailing cruise use.
