

“lutra 30v1” Bowsprit installation

We installed our 70 mm removable carbon bowsprit on a racing monotype model “Lutra 30 v1”. On this sailing boat, the installation was easier thanks to the absence of noses and anchors. It allowed us to use to mount our standard low bracket with a thickness to climb over the pulpit. The boat owner required the bowsprit to be mainly used for races, therefore, it goes out of the bow of about 1,4 meters and it does not require the use of braces.
