

“STAG 32” Bowsprit installation

On this Stag 32 we installed our 70 mm anodized aluminum removable bowsprit that allowed us to exit from the bow without mounting an upwind.
The spacious bow of the Stag 32 enabled us to easily install our standard bracket, while the anchor's forepeak granted us to install the folding eyebolt without making any additional holes.
The bracket had been increased in thickness to let the bowsprit to pass above of the bow pulpit attachment.
The owner of this sailing boat requested us to install a tiny pulley for firing the vane instead of the original bushing.
