

“Sun Odyssey 49” Bowsprit installation

On this Sun Odyssey 49' we installed our 80 mm removable bowsprit. Once again, we used a custom-made bracket as it could be fixed on the anchor nose using the through pin of the tonnage roller as a fixer. Thanks to the bracket that was mounted as much close to the bow as possible, the whole bowsprit tube was mounted in front of the forepeak, leaving enough space to anchor without removing the bowsprit. Subsequently, we added a small tie-rod which enabled the bowsprit to hoist sails such as code-0 and blenders.
