

“grand soleil 39” Bowsprit installation

On this Grand Soleil 39, we installed our 80 mm removable bowsprit with the aim of hoisting a “parasail” as well as the classic gennaker. The “parasail” is a particular sail that needs double walls.
As we wanted to leave the forepeak clear, we made a custom bracket to come forward as much as possible and to have a greater bowsprit’s length.
The stainless-steel bracket had been mirrored polished and it was designed to be easily fixed on the anchor nose. The position had been studied to leave enough space for the bowsprit to work under load and during positioning maneuvers.
